

Romantic Heidelberg

The venue above the city of Heidelberg

Our training has gained more and more participants over the last years which pleases us greatly! And we are determined to grow with this challenge, in every respect. We are happy to have found a new venue for our training. The romantic and idyllic castle Hotel **Molkenkur**, above the historical oldtown of Heidelberg. The „**Molkenkur**“ is the ideal place for our series of trainings. During the breaks you can relax on the terrace and enjoy the fantastic view on the scenery of Heidelberg and on the river Neckar!

Why choose Mitochondrial medicine?

Mitochondria are cell organelles which produce the major proportion of our energy. Recent scientific research proves that more and more illnesses are due to damages of the cell organelles: **Alzheimer`s, Parkinson`s disease, cancer, autoimmune diseases, diabetes, multiple scleroses, or allergies** are only a few examples for the effects of cell organelle damages.

Mitochondria medicine focuses on the regeneration and support of these cell organelles so that in many cases of complex or chronic deases surprising improvements or even healing for the patients can be achieved.

Mitochondria medicine covers many areas of therapy, as for example:

Treatment of mitochondrial noxa

In our modern world there is a wide range of causes and possibilities for mitochondria damages. Competent diagnostic and fundamental knowledge are essentail to meet the needs and requirements of specialized therapy methods.

Treatment of defects in metabolism

With the help of a specialized nutrition therapy and orthomolecular medicine patients can be treated effectively.

Real prevention

An early and timely use of mitochondrial medicine can delay or even prevent many diseases.

Analysis of life style, psychotherapy and more

Clinical Mitochondria- and Environmental Medicine 2018

**Medical training recognized
by the German medical
association**

This training curriculum addresses:

**doctors, pharmacists, dentists, alternative
practicioners, (junior-) bioscientists**

Training 2018

- **Course A: 2nd to 3rd of March**
- **Course B: 14th to 15th of September**

The Curriculum 2018

The curriculum takes place in Germany, Heidelberg, in the Castle Hotel **Molkenkur**. It consists of four weekends between March and October 2018, always two full day trainings on Friday and Saturday. Content of the courses are presentations, discussions and practical exercises. **The curriculum can only be booked as a whole.**

Renowned lecturers from medical research and speakers of practical medical experience present and discuss recent findings, diagnostic methods and possible therapies with help of practical and real life examples.

This training addresses doctors, dentists, pharmacists and alternative practitioners and is acknowledged as medical training by the German medical association. German participants can obtain **18** training points per weekend, **training points in total for the curriculum are 72 points.**

Registration:

Registration deadline: January 31, 2018

Fee: 1650,- €

Early bird discount: Registration till Sep. 30th 2017 - 1450,- €; till Nov. 30th 2017 - 1550,- €

Registration **online** only:

Training elements

- Introduction into the Mitochondria medicine –diagnostics and therapies
- Mitochondria and environmental medicine - in theory and practice
- Environmental medicine: diagnostics, dental toxic load in jaws, materials (amalgam and others)
- Recent findings on immunology
- Recent findings on tumor immunology
- Recent findings on women`s health
- Recent findings on neuro-psychological stress
- CFS, ME, MCS, HPU
- Effects of radiation
- heavy-metal contamination
- Presentation of specific laboratory parameters
- Importance of mitotopic substances
- Importance of mitogenic substances
- Practical micro-nutrient medicine
- Orthomoleculare medicine
- Special nutrition therapies
- Importance of psychological aspects
- Detoxification by plants or plant extracts
- Use of modern equipments and new technologies
- Recent research results
- Negative effects of mental and physical trauma
- Recent findings on microbioms and the therapeutic relevance of microbioms
